

ClipQuest Headless Question QA

DeepSeek generation, normal-answer simulation, exact grading, and negative controls

Run date: 18 August 2026 | Local repository QA | Evidence run across 10 fresh YouTube sources

Result: 8 of 10 sources completed. 80 questions were generated and checked; 80 of 80 intended learner answers were accepted, 80 deliberately wrong controls were rejected, and every short-response answer passed.

This is a diagnostic quality run, not a claim that every generated question is editorially perfect. It exercises the local DeepSeek generator and grading decision paths used by ClipQuest, while keeping caption text and the API key out of this report. Two sources failed before a question set could be accepted because the generator repeatedly produced a duplicate grading objective; those failures are preserved as evidence.

1. Executive summary

Metric	Observed	Interpretation
Fresh YouTube sources	10	10 newly selected captioned videos
Source result	8 pass / 2 fail	80 completed questions; 2 generation failures
Question sizes	5, 10, and 15	Varied quiz lengths across the source set
Question types	MC, true/false, short answer	All three requested types included on every completed set
Accepted intended answers	80 / 80	Normal learner answer path succeeded
Rejected wrong controls	80 / 80	Wrong answers did not pass
Short responses	27 / 27	Canonical short answers accepted; alternate forms checked when available
DeepSeek calls	81	Successful-generation calls counted; 48 failed-source attempts recorded separately (16 structural retries)

2. Test boundary and method

The run used local caption files acquired with yt-dlp and the ClipQuest local DeepSeek generator profile prompt_first_auto_v5_12. The Worker was not used for AI generation, captions were not uploaded, and no API key is included in the evidence. Each source was assigned a deliberately different target size: 5, 10, or 15 questions.

For each accepted generated question, the script simulated the normal learner answer: the generated answer index for multiple choice, the generated boolean for true/false, and the canonical answer text for short answer. It then passed that value through the exact progressive grading decision helper used by the API. A negative control was also graded: the next MC choice, the inverted boolean, or the literal response I do not know. Short-answer alternatives were checked when supplied.

A source was marked failed only when generation could not produce an accepted complete quiz after its structural retry guard. A failure therefore indicates generation or validation instability before learner grading, not an answer-grading failure.

3. Source matrix

Video / source	Size	Status	Qs	MC / TF / SA	AI	Time
What Is An Earthquake? The Dr. Binocs Show Educational Videos For Kids dJplU1rSOFY	15	PASS	15	5 / 5 / 5	16	30.0 s
Nuclear Energy Explained: How does it work? 1/3 rcOFV4y5z8c	10	FAIL	0	0 / 0 / 0	-	32.0 s
Excretory System and the Nephron q5qaGHfdmYM	15	PASS	15	5 / 5 / 5	15	33.3 s
How Climate Change /Actually/ Works...in 4 Minutes CGoNpwN0mrs	5	PASS	5	2 / 1 / 2	5	10.5 s
Journey of Sound to the Brain eQEaiZ2j9oc	10	PASS	10	3 / 3 / 4	10	18.3 s
How Do Corals Build Reefs? California Academy of Sciences nBO7zWO1zXY	15	FAIL	0	0 / 0 / 0	-	24.0 s
What is inflation? Economics explained HQ-Kg_xgdhE	5	PASS	5	1 / 2 / 2	5	12.2 s
Blockchain In 7 Minutes What Is Blockchain Blockchain Explained How Blockchain Works Simplelearn yubzJw0uiE4	10	PASS	10	4 / 3 / 3	10	25.3 s
How the Internet Works in 4 Minutes Animation Video Sfzo4xm5eX8	15	PASS	15	5 / 5 / 5	15	36.8 s
How your digestive system works - Emma Bryce Og5xAdC8EUI	5	PASS	5	2 / 2 / 1	5	12.1 s

Stable video IDs make each row unambiguous. The full source URLs are printed in each completed-source appendix.

4. Failure analysis

Nuclear Energy Explained: How does it work? 1/3 (rcOFV4y5z8c) - The grading target repeats an already accepted objective.

URL: <https://www.youtube.com/watch?v=rcOFV4y5z8c> | Target size was 10 questions and the local caption file contained about 734 words. The generator made 28 recorded attempts, including 8 automatic structural retries, but no complete question set was accepted. Because no question set reached learner simulation, this source contributes zero accepted answers and zero negative controls. The defect to investigate is duplicate-objective detection and regeneration diversity for this content shape.

How Do Corals Build Reefs? | California Academy of Sciences (nBO7zWO1zXY) - The grading target repeats an already accepted objective.

URL: <https://www.youtube.com/watch?v=nBO7zWO1zXY> | Target size was 15 questions and the local caption file contained about 193 words. The generator made 20 recorded attempts, including 8 automatic structural retries, but no complete question set was accepted. Because no question set reached learner simulation, this source contributes zero accepted answers and zero negative controls. The defect to investigate is duplicate-objective detection and regeneration diversity for this content shape.

The failed sources are actionable regression signals. They should not be hidden by converting the sources to passes or by treating a retry toast as successful generation.

5. Detailed completed-source evidence

The appendices list every completed question. The learner answer is the value submitted through the normal grading contract; the wrong-control column records the deliberately incorrect value being rejected. For short answers, the grade path shows the

atomic or rubric decision selected by the API helper.

What Is An Earthquake? | The Dr. Binocs Show | Educational Videos For Kids (dJpIU1rSOFY)

URL: <https://www.youtube.com/watch?v=dJpIU1rSOFY> | Target size: 15 | Caption words: 369 | AI calls: 16 | Duration: 30.0 s |

Type counts: 5 MC / 5 true-false / 5 short

#	Type / prompt	Learner answer	Canonical answer	Grade path	Wrong control
1	Multiple Choice What is the name for the place where an earthquake originates?	4. The hypocenter	The hypocenter	answer_index	Rejected (answer_index_mismatch)
2	True False An earthquake is the drifting apart of plates at a divergent boundary.	False	False	boolean_exact	Rejected (boolean_mismatch)
3	Short Answer What causes an earthquake at the Earth's surface?	Tectonic plates hitting, bumping, or sliding past each other	Tectonic plates hitting, bumping, or sliding past each other	atomic_exact	Rejected (required_id_ea_missing); alternate short accepted=True
4	Multiple Choice What happens at a convergent boundary during an earthquake that produces a thrust fault?	2. One plate is forced over another plate.	One plate is forced over another plate.	answer_index	Rejected (answer_index_mismatch)
5	Short Answer What does the surface of the Earth resemble?	The surface of the Earth is like a jigsaw puzzle made of approximately 20 moving pieces.	The surface of the Earth is like a jigsaw puzzle made of approximately 20 moving pieces.	atomic_exact	Rejected (required_id_ea_missing)
6	True False A tsunami is caused when an earthquake occurs underwater.	True	True	boolean_exact	Rejected (boolean_mismatch)
7	Multiple Choice What is the name for the place on Earth's surface directly above where an earthquake originates?	3. The epicenter	The epicenter	answer_index	Rejected (answer_index_mismatch)
8	True False A strike-slip fault is a type of fault where the plates slip past each other horizontally.	True	True	boolean_exact	Rejected (boolean_mismatch)
9	Short Answer What is the surface where tectonic plates slip called?	Fault	Fault	atomic_exact	Rejected (required_id_ea_missing); alternate short accepted=True
10	Short Answer At a convergent boundary, what movement of plates produces a thrust fault during an earthquake?	One plate is forced over another.	One plate is forced over another.	atomic_exact	Rejected (required_id_ea_missing); alternate short accepted=True
11	True False The surface of the Earth is made of approximately 20 pieces that constantly move.	True	True	boolean_exact	Rejected (boolean_mismatch)
12	Multiple Choice Which condition is required for an earthquake to cause a tsunami?	1. The earthquake must occur underwater.	The earthquake must occur underwater.	answer_index	Rejected (answer_index_mismatch)
13	Short Answer What is the term for the place where an earthquake originates?	Hypocenter	Hypocenter	atomic_exact	Rejected (required_id_ea_missing)
14	Multiple Choice What happens to tectonic plates at a strike-slip fault?	3. The plates slip past each other horizontally.	The plates slip past each other horizontally.	answer_index	Rejected (answer_index_mismatch)
15	True False An earthquake is caused when tectonic plates hit, bump, or slide past another plate.	True	True	boolean_exact	Rejected (boolean_mismatch)

Excretory System and the Nephron (q5qaGHfdmYM)

URL: <https://www.youtube.com/watch?v=q5qaGHfdmYM> | Target size: 15 | Caption words: 1760 | AI calls: 15 | Duration: 33.3 s
| Type counts: 5 MC / 5 true-false / 5 short

#	Type / prompt	Learner answer	Canonical answer	Grade path	Wrong control
1	Multiple Choice Which organ is an accessory organ of the digestive system and also plays a role in the excretory system by detoxifying substances?	1. The liver	The liver	answer_index	Rejected (answer_index_mismatch)
2	Short Answer Which body system is often less familiar to people than the circulatory, nervous, digestive, and muscular systems?	The excretory system	The excretory system	atomic_exact	Rejected (required_id_ea_missing); alternate short accepted=True
3	True False Reabsorbed substances such as glucose move from the interstitial fluid into the nephron tubule.	False	False	boolean_exact	Rejected (boolean_mismatch)
4	Short Answer Under what condition may a person with severely compromised kidney function need regular dialysis?	When a kidney transplant is not ideal or possible for the situation, the person may need regular dialysis.	When a kidney transplant is not ideal or possible for the situation, the person may need regular dialysis.	atomic_exact	Rejected (required_id_ea_missing)
5	True False Hypertonic interstitial fluid has a lower solute concentration than the filtrate.	False	False	boolean_exact	Rejected (boolean_mismatch)
6	Multiple Choice Which substances are major components of the filtrate that enters the Bowman's capsule?	3. Water, some glucose and amino acids, salts, H ⁺ ions, and bicarbonate ions	Water, some glucose and amino acids, salts, H ⁺ ions, and bicarbonate ions	answer_index	Rejected (answer_index_mismatch)
7	True False In the distal convoluted tubule, substances such as H ⁺ , ammonium, and potassium are secreted into the filtrate, whereas substances such as NaCl, water, and bicarbonate are reabsorbed from the filtrate.	True	True	boolean_exact	Rejected (boolean_mismatch)
8	Short Answer Through which structure is urine expelled from the body after being stored in the bladder?	Urine is expelled from the body through the urethra.	Urine is expelled from the body through the urethra.	atomic_exact	Rejected (required_id_ea_missing); alternate short accepted=True
9	Multiple Choice What happens to the solute concentration of the filtrate as it moves down the descending limb of the nephron loop?	2. It increases because water leaves the filtrate while solutes remain.	It increases because water leaves the filtrate while solutes remain.	answer_index	Rejected (answer_index_mismatch)
10	Short Answer What does the excretory system include?	The excretory system includes the kidneys, ureters, bladder, and urethra.	The excretory system includes the kidneys, ureters, bladder, and urethra.	atomic_exact	Rejected (required_id_ea_missing)
11	True False The lungs excrete urea as a gas waste product.	False	False	boolean_exact	Rejected (boolean_mismatch)
12	Multiple Choice Which organs are the primary focus of the excretory system for removing waste?	4. The kidneys	The kidneys	answer_index	Rejected (answer_index_mismatch)
13	Multiple Choice How do the skin, liver, and lungs contribute to the excretory system?	3. They each excrete specific waste products or excess substances from the body.	They each excrete specific waste products or excess substances from the body.	answer_index	Rejected (answer_index_mismatch)
14	Short Answer What two major issues do the skin, liver, lungs, and kidneys help address as part of the excretory system?	Removing waste products and excess substances from the body.	Removing waste products and excess substances from the body.	atomic_exact	Rejected (required_id_ea_missing)
15	True False The skin, liver, lungs, and kidneys each help address the two major excretory issues of removing waste products and excess substances from the body.	True	True	boolean_exact	Rejected (boolean_mismatch)

How Climate Change /Actually/ Works...in 4 Minutes (CGoNpwN0mrs)

URL: <https://www.youtube.com/watch?v=CGoNpwN0mrs> | Target size: 5 | Caption words: 956 | AI calls: 5 | Duration: 10.5 s |

Type counts: 2 MC / 1 true-false / 2 short

#	Type / prompt	Learner answer	Canonical answer	Grade path	Wrong control
1	Multiple Choice What happens to visible light when it is not absorbed by a material?	2. It is either reflected or let pass through.	It is either reflected or let pass through.	answer_index	Rejected (answer_index_mismatch)
2	Short Answer What is the direct result when more energy enters Earth's atmosphere than leaves it?	More energy coming in than going out results in more heat, more severe weather, and a third consequence considered the most severe.	More energy coming in than going out results in more heat, more severe weather, and a third consequence considered the most severe.	atomic_exact	Rejected (required_ida_missing)
3	Multiple Choice What is the relationship between carbon dioxide and methane and visible light?	1. They do not absorb visible light, so they are clear and invisible.	They do not absorb visible light, so they are clear and invisible.	answer_index	Rejected (answer_index_mismatch)
4	Short Answer What is the only way to stop the effects of climate change?	The only way to stop the effects is to have less carbon dioxide and methane in the atmosphere.	The only way to stop the effects is to have less carbon dioxide and methane in the atmosphere.	atomic_exact	Rejected (required_ida_missing)
5	True False Climate change can cause power grids to fail because people may use air conditioners much less than in the past.	False	False	boolean_exact	Rejected (boolean_mismatch)

Journey of Sound to the Brain (eQEaiZ2j9oc)

URL: <https://www.youtube.com/watch?v=yubzJw0uiE4> | Target size: 10 | Caption words: 1106 | AI calls: 10 | Duration: 25.3 s | Type counts: 4 MC / 3 true-false / 3 short

#	Type / prompt	Learner answer	Canonical answer	Grade path	Wrong control
1	Multiple Choice Why does a transaction fail when a user attempts to send more bitcoins than they own in a shared ledger system?	3. The shared ledger copies held by other participants show the user's true balance, so the transaction is flagged as invalid.	The shared ledger copies held by other participants show the user's true balance, so the transaction is flagged as invalid.	answer_index	Rejected (answer_index_mismatch)
2	Multiple Choice In a blockchain, what method is used to determine which miner adds a validated block to the chain?	2. Solving a complex mathematical problem first	Solving a complex mathematical problem first	answer_index	Rejected (answer_index_mismatch)
3	Short Answer When a customer flags a product as damaged, what can blockchain permanently inscribed records enable a company to identify?	The company can identify where the product got damaged in the entire supply chain.	The company can identify where the product got damaged in the entire supply chain.	atomic_exact	Rejected (required_id_ea_missing); alternate short accepted=True
4	True False Cryptocurrencies are a form of digital money that emerged to address problems with traditional bank transactions.	True	True	boolean_exact	Rejected (boolean_mismatch)
5	Short Answer Which hashing algorithm does Ethereum use?	Ethash	Ethash	atomic_exact	Rejected (required_id_ea_missing)
6	Multiple Choice When Phil sends two bitcoins to Jack, what is created as a permanent record of the transaction?	4. A block containing the transaction details and the bitcoin balances of the participants.	A block containing the transaction details and the bitcoin balances of the participants.	answer_index	Rejected (answer_index_mismatch)
7	True False A blockchain is a private centralized ledger held by a single participant, with each block linked to the previous one.	False	False	boolean_exact	Rejected (boolean_mismatch)
8	True False Every user in the bitcoin network has two keys: a public key and a shared key.	False	False	boolean_exact	Rejected (boolean_mismatch)
9	Multiple Choice What happens when Phil sends his share of the dinner expense to Jack through an online money transfer?	1. The transaction goes through without a hitch.	The transaction goes through without a hitch.	answer_index	Rejected (answer_index_mismatch)
10	Short Answer What reward does a miner receive for adding a block to the blockchain through proof of work?	The miner is rewarded with 12.5 bitcoins.	The miner is rewarded with 12.5 bitcoins.	atomic_exact	Rejected (required_id_ea_missing)

How the Internet Works in 4 Minutes | Animation Video (Sfzo4xm5eX8)

URL: <https://www.youtube.com/watch?v=Sfzo4xm5eX8> | Target size: 15 | Caption words: 623 | AI calls: 15 | Duration: 36.8 s |
Type counts: 5 MC / 5 true-false / 5 short

#	Type / prompt	Learner answer	Canonical answer	Grade path	Wrong control
1	Multiple Choice Why is a domain name like google.com used instead of its IP address?	1. Because domain names are easier for humans to remember than numeric IP addresses.	Because domain names are easier for humans to remember than numeric IP addresses.	answer_index	Rejected (answer_index_mismatch)
2	Short Answer Why is transmitting internet data via satellite considered ineffective, and what alternative transmission medium is used instead?	Satellite bandwidth is very limited and leads to long delays, so the internet circulates mostly through fiber optic cables that cross the earth under seas and oceans.	Satellite bandwidth is very limited and leads to long delays, so the internet circulates mostly through fiber optic cables that cross the earth under seas and oceans.	atomic_exact	Rejected (required_ida_missing)
3	True False DNS associates a name with each website's IP address, functioning like a map.	False	False	boolean_exact	Rejected (boolean_mismatch)
4	Multiple Choice What physical medium carries internet data between devices across the globe?	4. Cables laid across the globe	Cables laid across the globe	answer_index	Rejected (answer_index_mismatch)
5	True False A laptop connected to the internet via cable or Wi-Fi through a router accesses data stored on a server in a landing station.	False	False	boolean_exact	Rejected (boolean_mismatch)
6	Short Answer Why does DNS technology exist?	DNS exists because humans find it easier to remember domain names than numeric IP addresses.	DNS exists because humans find it easier to remember domain names than numeric IP addresses.	atomic_exact	Rejected (required_ida_missing); alternate short accepted=True
7	Short Answer Why are submarine fiber optic cables made very thick?	To protect the fragile and sensitive optical fiber inside.	To protect the fragile and sensitive optical fiber inside.	atomic_exact	Rejected (required_ida_missing); alternate short accepted=True
8	Multiple Choice When a device uses mobile data, in what form does the internet signal reach the device after traveling through optical cables to a cell tower?	2. Electromagnetic waves	Electromagnetic waves	answer_index	Rejected (answer_index_mismatch)
9	True False A domain name such as google.com has an IP address hidden beneath it to make the address easier for humans to use.	True	True	boolean_exact	Rejected (boolean_mismatch)
10	True False Internet data circulates mostly through fiber optic cables that cross the earth under seas and oceans.	True	True	boolean_exact	Rejected (boolean_mismatch)
11	Short Answer What role does DNS play in associating website names with IP addresses?	DNS associates a name for each website with its IP address.	DNS associates a name for each website with its IP address.	atomic_exact	Rejected (required_ida_missing); alternate short accepted=True
12	Multiple Choice What physical medium carries internet data across the globe?	3. Cables laid across the globe	Cables laid across the globe	answer_index	Rejected (answer_index_mismatch)
13	Multiple Choice When a laptop is connected to the internet through a router, how does it access a video stored on a server in a data center?	4. The laptop sends a request through the router, which travels over the internet to the data center where the server stores the video, and the data is then sent back to the laptop.	The laptop sends a request through the router, which travels over the internet to the data center where the server stores the video, and the data is then sent back to the laptop.	answer_index	Rejected (answer_index_mismatch)
14	True False Numeric IP addresses are easier for humans to remember than domain names.	False	False	boolean_exact	Rejected (boolean_mismatch)
15	Short Answer Where do most fiber optic cables that carry internet data cross the earth?	Under seas and oceans.	Under seas and oceans.	atomic_exact	Rejected (required_ida_missing); alternate short accepted=True

How your digestive system works - Emma Bryce (Og5xAdC8EUI)

URL: <https://www.youtube.com/watch?v=Og5xAdC8EUI> | Target size: 5 | Caption words: 695 | AI calls: 5 | Duration: 12.1 s |

Type counts: 2 MC / 2 true-false / 1 short

#	Type / prompt	Learner answer	Canonical answer	Grade path	Wrong control
1	Multiple Choice What is the role of the body's enzymes, hormones, nerves, and blood in the digestive process?	3. They work together to break down food, modulate the digestive process, and deliver its final products.	They work together to break down food, modulate the digestive process, and deliver its final products.	answer_index	Rejected (answer_index_mismatch)
2	True False The digestive system is composed of 10 organs, spans about 9 meters, and contains over 20 specialized cell types.	True	True	boolean_exact	Rejected (boolean_mismatch)
3	Multiple Choice What is the role of bile in the small intestine?	2. It dissolves fats in the chyme so they can be digested.	It dissolves fats in the chyme so they can be digested.	answer_index	Rejected (answer_index_mismatch)
4	Short Answer What is the soft mass left after the colon drains most of the remaining fluid through the intestinal wall?	Stool	Stool	atomic_exact	Rejected (required_id_a_missing)
5	True False The esophagus is a 25-centimeter-long tube through which food travels from the stomach to the mouth.	False	False	boolean_exact	Rejected (boolean_mismatch)

6. Interpretation and next actions

The completed sources show strong contract-level behavior: all requested question types appeared, varied sizes were honored, canonical learner answers were accepted, wrong controls were rejected, and short-answer grading did not block completion. This is a strong signal for the answer-and-grade path.

The two failed sources expose a separate reliability risk in generation. Prioritize duplicate-objective diagnostics, diversify retry prompts or objective selection, and add these two video IDs as regression fixtures. After repair, rerun the same command shape and compare source pass rate, retry count, duplicate-objective events, and exact answer-control totals.

This run does not replace browser, iOS, or Android acceptance. It does not inspect visual layout, keyboard focus, extension handoff timing, PDF export, or network recovery. It also does not independently fact-check every generated item against the full video beyond the local caption-grounded generation contract.

7. Reproducibility

The run was executed from the ClipQuest repository with a temporary local caption directory and a local DeepSeek key loaded from the environment. The script used the shared quiz generator and the API progressive short-answer grading helper. A safe JSON evidence file was written to /tmp/clipquest-headless10-report.json during the run; it contains generated question evidence and grading outcomes, but not raw captions or secrets.

Command shape (key omitted):

```
npx -y tsx /tmp/clipquest-headless10.mts <caption-dir> <10 YouTube IDs>
```
